

Project Progress Report -4

Name: Thanvendra Eswar Amara

Student ID: 02035530

Git User ID: amarathanvi

Project: CarKonnnect: An app to find used cars and spare parts

What Am I Proud about:

- I was able to write HTML and CSS code for sign up page where a new customer can register for our page by entering some basic information like email, first name, last name along with their password.
- I was able to save all these information to firestore database.
- I was also able to add user uid to Google cloud firestore database.
- Modified the CSS part for the page as it is updated from previous one
- I have improved the user interface compared to last week

Next Steps :

- Need to connect with API's
- Collect the data for used cars
- Need to add some more keys and buttons
